

## **THE USE OF SATELLITE DATA IN OPERATIONAL NUMERICAL WEATHER PREDICTION MODELS: CURRENT STATUS AND FUTURE PLANS**

*Louis Uccellini, National Weather Service, National Centers for Environmental Prediction (NCEP)*

NCEP, a central component of the NOAA National Weather Service, has been the focal point of the nation's environmental modeling efforts for 53 years. Its mission is to deliver national and global weather, water, climate and space weather guidance, forecasts, warnings and analyses to its partners and external user communities. These products and services ultimately help to protect life and property, enhance the nation's economy and support the nation's growing need for environmental information (NOAA Magazine 2/8/07).
